	3 Years	20%	25%
	5 Years	30%	

Discontinuance before term commitment is fulfilled:

If a customer discontinues the PRI/ISDN service within the contract period currently in effect, termination charges will apply. Such charges will be calculated as follows:

A customer who agrees to a term commitment and starts the term specified, but cancels their service before it's completed, will be subject to the following cancellation penalties.

The customer will be required to pay the difference in rates between the term signed and the term completed. For example, a customer signs a three-year term and receives a 20% discount. They cancel after two-years, which has a 15% discount. The customer will be required to pay the 5% difference in discounts they received, but wouldn't have received if they had signed the two-year term originally.

A customer who signs a term of service commitment, but discontinues service before completion of the first year of the agreed upon term must pay back all waived nonrecurring charges.

3. Underground Construction in Subdivisions in Advance of Service

Types of Subdivisions - Where underground distribution plant would normally be provided at the option of the Utility, no construction charges are applicable.

Subdividers and developers frequently request the installation of underground distributing plant and service entrances where aerial plant would normally be provided by GCI, in subdivision in advance of telephone service. In connection with such requests, subdivisions are generally classified as follows:

Type 1 - Subdivisions that are laid out and houses built on every lot by the developer on a mass production basis.

Type 2 - Subdivisions that are laid out by the developer, who builds houses on a few select lots or sells lots to prospective owners or contractors.

Type 3 - Subdivisions that are laid out by the developer and lots sold individually to prospective owners or contractors.

In all three types of subdivisions, the subdivider or builder must agree to:

- a. Furnish rear and side lot easements as required, and
- b. Provide a semi-finished final grade for the entire width and length of the easement at such time as it is necessary to install the distributing cable, and
- c. Subdivider or developer digs and backfills trenches for distribution cable and all service entrances. All trench and backfill requirements will be at no cost to the Utility (applies to Type 1 and 2 subdivisions only), and
- d. Adhere to the provisions of the National Electrical Safety Code and Utility specifications.
